

## Become an Expert in Your Data Center

### Offerings

- Accomplish more with F5 technology
- Accelerate learning with lectures, discussions, and labs
- Choose a delivery method that works for you

The innovative ways you control business-critical technology can give your organization an edge. Learn to deploy flexible solutions that deliver fast, secure, and available applications to support your business, now and in the future.

F5® Global Training Services instructors use practical, real-world experience to teach you to handle network, storage, server, and security challenges in your own network environment.

With training available onsite at your location and worldwide through a training network that includes in-classroom and remote online courses, you can choose the best delivery method for your business. In addition, F5 offers web-based, self-paced training.

### Accomplish more with F5 technology

Courses are available on almost all F5 products. From essentials to advanced topics, you'll learn best practices for deploying and configuring your F5 products. Whether you're interested in architecture and design, configuration, or security, there's a course that can help you accomplish your goals.

### Accelerate learning with lectures, discussions, and labs

To help you get up to speed quickly, F5 courses combine instructor presentations, classroom discussions, and hands-on labs.

Drawing on their in-depth networking and training expertise, F5 instructors share the knowledge and skills necessary for you to be self-sufficient in your own network environment.

Hands-on labs offer an invaluable opportunity to configure and use the latest F5 products with an instructor available to help. You get real-world experience, immediate feedback, and a chance to ask questions and clarify procedures.

### Choose a delivery method that works for you

A variety of training options—including onsite, in-classroom, remote, and self-paced courses—are available for your convenience.

Whether you're deploying new F5 technology or want to improve operations, onsite training helps you acquire the knowledge and skills necessary for success in your unique network environment.

An F5 instructor will work with you to tailor onsite course content to fit your specific needs. In addition to knowledge transfer, onsite training provides an excellent opportunity for members from different departments in your organization to get together to discuss options and share best practices. With an F5 instructor to lead discussions, explain different ways to use product features, and facilitate future planning, onsite training can provide a fast track to accomplishing goals. To avoid security concerns, F5 provides a self-standing lab.

In-classroom, open-enrollment training is offered at multiple training facilities across five continents. These instructor-led courses provide hands-on learning, problem-solving activities, and constructive feedback.

Remote online courses mirror classroom training. Participants watch the remote instructor's live lecture online, participate in discussions, and perform lab exercises using remote desktop control of in-classroom computers.

On the F5 website, you can take introductory, self-paced courses on F5 products and supporting technologies. These self-paced courses are available anytime, from anywhere, and for free.
