F5 and Cleversafe
PARTNERSHIP OVERVIEW

The F5 and Cleversafe Technology Partnership

Key benefits

· Greater scalability
· Enhanced network utilization
· Improved application performance

Cleversafe's object-based storage solution and inherent data encryption gives organizations the ability to easily store and manage large-scale digital content securely. Together with F5® BIG-IP® Local Traffic Manager™ (LTM) and BIG-IP® WAN Optimization Manager™ (WOM), applications are delivered in an agile, highly scalable, fast, and secure geographically dispersed infrastructure. BIG-IP LTM is a full proxy between users and application servers, creating a layer of abstraction to secure, optimize, and load balance application traffic, and BIG-IP WOM optimizes latent WAN connections. This gives users the flexibility and control to add applications and servers easily to their geographically dispersed storage environments and improve network performance.

Increase Scalability and Performance

The challenge of addressing tremendous data growth combined with managing dispersed infrastructure requires best-of-class technology. Organizations need a highly available and fast infrastructure that they can easily scale up and down across dispersed locations, while staying within their budgetary constraints. The F5 and Cleversafe joint solution can help your organization meet these requirements.

F5 improves the network infrastructure for Cleversafe deployments.

Greater scalability

F5 BIG-IP Local Traffic Manager (LTM)
improves the Cleversafe Accesser component
scalability, enabling organizations to rapidly
scale up or down based on their user needs
at the time. In today's virtual environments
and cloud infrastructures, having this ability
to accommodate the changing demands of
users is critical.

Enhanced network utilization and improved performance

F5 BIG-IP WAN Optimization Manager
(WOM) improves network performance
by optimizing slow WAN connections within
their geographically dispersed infrastructure.
The joint solution with Cleversafe provides
your organization with an optimized
infrastructure over the WAN. This is ideal
for business continuance and disaster
avoidance requirements.
