> "A combined solution from F5 and Quarri provides us the opportunity to jointly deliver end-to-end web session security, with a comprehensive web security suite … for managed and unmanaged endpoints."

Bill Morrow, Executive Chairman and CEO, Quarri Technologies

The F5 and Quarri Partnership

Key benefits

· Hardened client browsers
· Easy enforcement of corporate policies
· Comprehensive security for web-based applications

F5 and Quarri help organizations better secure the end points of their corporate infrastructure—the client browser. The joint solution combines Quarri Protect on Q (POQ) with F5® BIG-IP® Local Traffic Manager™ (LTM) to enforce corporate security policies that require the use of POQ-hardened client browsers. This helps organizations defend against both external and internal attacks, and prevent unauthorized use and replication of confidential data.

Enforce On-Demand Web Session Security

As applications become increasingly web-based, the client browser becomes the primary platform for delivering information, and an attractive target for attack.

As an Application Delivery Controller, BIG-IP LTM provides the ideal platform to enforce the use of POQ-hardened browsers. POQ can interact with BIG-IP LTM using the F5 iRules® control language, instructing it to redirect clients to the POQ server before they can access the protected web application through a secure connection. With BIG-IP LTM and POQ, organizations can secure all client browsers, and shield sensitive data from key loggers, frame grabbers, session hijacking, cache miners, and other malware, as well as prevent end users from copying, saving, printing, or screen-capturing browser-delivered data.

Video

· In 5 Minutes Guest Edition: BIG-IP LTM Integration with Quarri POQ
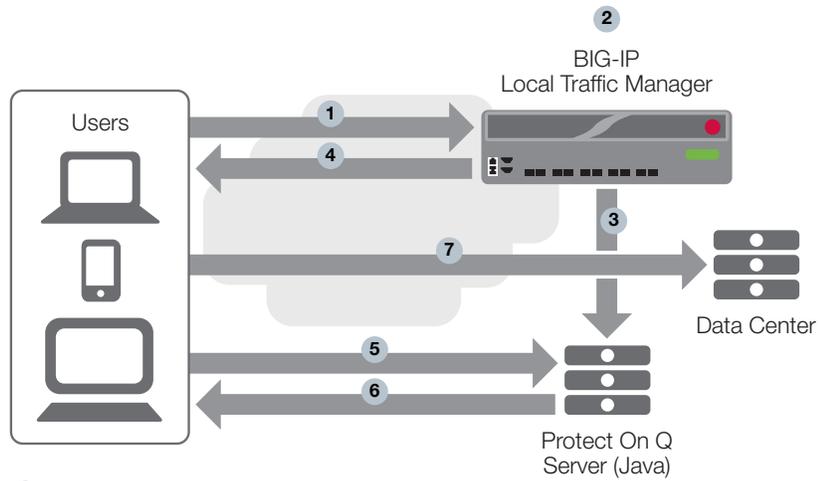

1   User connects to protected application(s)

2   F5 BIG-IP LTM intercepts the connection

3   Quarri Validation iRule Check verifies POQ session ID

4   F5 BIG-IP LTM sends HTTP redirect to user's browser

5   Client is redirected to Quarri server

6   POQ delivers a site-specific secure browser

7   Client securely connects to the data center

Secure client browsers and protect against information leakage with the joint F5 BIG-IP LTM and Quarri POQ solution.

Hardened client browsers

Protect web-delivered data from unauthorized use and replication by malware and end users.

Easy enforcement of corporate policies

Ensure that all clients have a secure connection before allowing access to web applications.

Comprehensive security for web-based applications

Extend and enhance the security posture of web-facing applications with no changes to web applications.
