

“The integrated solution. . . enables us to integrate our F5 environment into our Cloud Services. . . allowing us to provide our services fast and cost effectively.”

Eyup Koc, Project Manager, Cloud Lifecycle Mgmt at Swisscom

## The F5 and BMC Partnership

### Key benefits

- Automated configuration and monitoring
- Customized configuration
- Time and cost savings
- Faster deployment of services

F5 and BMC have partnered to help enterprises and service providers improve control for private, public, or hybrid cloud services. The joint solution extends the intelligent traffic management capabilities of F5® BIG-IP® Local Traffic Manager™ (LTM) to the cloud. The BIG-IP® system integrates with BMC software to enable customers to provision, manage, and monitor storage and network resources and/or services—and provide them with complete control over application traffic—from a central dashboard. IT departments and service providers gain flexible, automated, and simplified control over cloud environments while ensuring that apps and services are always fast and available.

### Service Automation for Single and Multi-Tenant Environments

The cloud promises efficiency and cost savings, but only when business needs are met and quality services delivered. BMC Cloud Lifecycle Management (CLM) software helps organizations reap cloud rewards with flexible self-service options, a model-based approach for deploying services, and intelligent, policy-based operations for provisioning resources. BMC CLM securely connects to the BIG-IP system’s TMSH (TMOS® Shell) command-line interface to complete the circle with fully integrated traffic management and optimization.

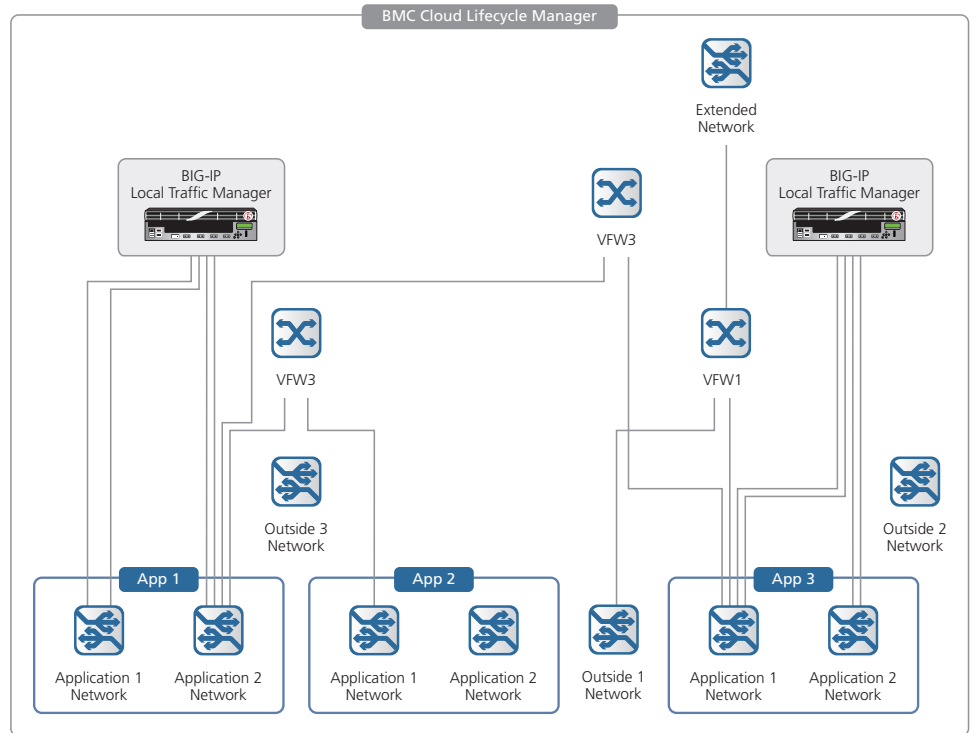

## Learn more

For more information about BMC Software, go to [www.bmc.com](http://www.bmc.com) to find resources about these topics.

“The integrated solution of BMC Cloud Lifecycle Management and F5 enables us to integrate our F5 environment into our Cloud Services. When new tenant networks are created, CLM Network Automation automatically creates the necessary configurations, like VLAN settings, in the F5 solution.

The solution runs under a single UI and management plane, which hides the complexity from the operations team, allowing us to provide our services fast and cost effectively.”

Eyup Koc, Project Manager,  
Cloud Lifecycle Mgmt at Swisscom

BMC CLM and F5 BIG-IP LTM integrate to extend control to the cloud.

### Automated configuration and monitoring

Automate configuration and monitoring of network services and devices in multi-tenant environments—in public, private, or hybrid clouds.

### Customized configuration

Deliver customized services based on business needs or specific application requirements.

### Time and cost savings

Save time and overhead by managing multiple devices and services from a central management console.

### Faster deployment of services

Deploy new cloud-based or hybrid services faster, with automated provisioning capabilities that reduce time to deployment.
