

"BIG-IP solutions ensure maximum availability, enhanced performance, and security for mission-critical Oracle applications. We use approximately 170 BIG-IP devices in four data centers worldwide"

Leonid Stavnitser, Senior Manager of Global IT, Oracle USA, Inc.

The F5 and Oracle Technology Partnership

Key benefits

- Superior application ownership
- Lower OpEx, CapEx, and TCO
- Faster and lower-risk deployments

Since 2001, F5® and Oracle have collaborated to deliver industry-leading solutions that enable organizations to get the most out of their enterprise IT investments. F5 and Oracle have jointly documented best practices for deploying F5 with Oracle for maximum availability, performance, and security—from applications and middleware to database—all backed by a global, cooperative support agreement that assures customers have the best experience possible. In fact, Oracle runs its own Global IT and Oracle On Demand services using F5 BIG-IP® devices.

Improved Performance and Productivity

F5 provides a unique application delivery platform that helps accelerate application performance over the network. The F5 Application Ready Solution for Oracle offers a holistic application architecture designed for the implementation of F5 solutions with Oracle products. The Application Ready Solution for Oracle was designed, deployed, and tested to ensure the secure, reliable delivery of Oracle applications.

* Supports Oracle Access Manager ** Supports Oracle Database Firewall

F5 and Oracle solutions in the data center.

Superior application ownership

Reduce costs, improve business and service continuity, and create a dynamic Application Delivery Network.

Lower OpEx, CapEx, and TCO

Decrease complexity, reduce server count and infrastructure, and improve application lifecycle management as well as human and capital resource utilization.

Faster and lower-risk deployments

Improve SOA compliance and security postures, and simplify server and infrastructure management.
