

The F5 and SecureAuth Partnership

Key benefits

- Simplify authentication and authorization for web applications
- Remove SiteMinder complexity
- Dramatically reduce management overhead
- Enable BIG-IP APM as your main point of control and enforcement

F5 and SecureAuth have partnered to help enterprises using CA SiteMinder simplify web access operations and ensure web application security without the need for complicated agent installations. The SecureAuth PDP (Policy Decision Point) solution allows F5[®] BIG-IP[®] Access Policy Manager[®] (BIG-IP APM) to access policies stored in the SiteMinder policy server, giving you the authorization control you need without having to deploy multiple web agents across your servers.

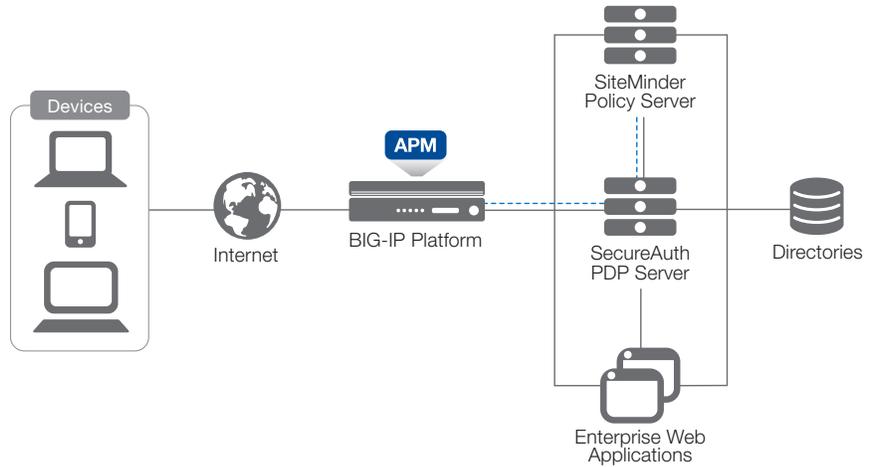

Maintain security while simplifying access and authorization

When you employ the F5 and SecureAuth PDP solution, you can remove complicated agents from web application servers via the F5 iRules[®] scripting language. With an iRule, you can allow BIG-IP APM to communicate directly with the SecureAuth server. This allows you to utilize BIG-IP APM as the central access point for all users while maintaining SiteMinder protection for authorization—resulting in a much more scalable, reliable, and secure system.

Learn more

For more information about F5 and SecureAuth solutions, visit the [SecureAuth and F5 partnership page](#) on [f5.com](#).

You can also find more details on [secureauth.com](#).

The SecureAuth PDP server integrates with BIG-IP APM via iRules.

Simplify integration via iRules

Integrate SiteMinder's authorization and single sign-on (SSO) functionality while ensuring strong security using an iRule with BIG-IP APM.

Scale your infrastructure

Address your application access and authorization issues while maintaining superior performance with the scalability and high performance of BIG-IP APM.

Streamline web application access

Remove complexity from your enterprise and ensure that security policies can be deployed in a repeatable fashion through a single access portal for all web applications.
