

“The joint F5 and Venafi best practices solution is critical to our customers’ data security and risk management efforts.”

Trell Rohovit, Vice President Strategic Alliances, Venafi

## The F5 and Venafi Partnership

### Key benefits

- Painless risk reduction
- Superior return on investment
- Simplified compliance

F5 Networks® and Venafi have partnered to help organizations reduce security risks and comply with regulations while improving application delivery. To best meet the needs of customers who deploy Venafi Encryption Director with F5 BIG-IP® solutions, F5 and Venafi have jointly created an out-of-the-box, secure sockets layer (SSL) certificate and key management solution for BIG-IP devices. The solution helps organizations successfully protect digital business assets while keeping performance high and costs low.

### Secure, Optimized Application Delivery

In response to security threats, organizations often deploy encryption broadly, but this approach can lead to poor performance and reduced operational efficiency. The F5 BIG-IP product family accelerates secure network applications, while Venafi Encryption Director automates key and certificate lifecycle for BIG-IP devices, to ensure streamlined management and security best practices. The joint solution helps customers realize higher efficiency and lower administrative costs with centralized SSL management.

- Venafi Collateral Library

### Press release

- Venafi Partners with F5 Networks to Deliver Automated Enterprise Key and Certificate Management Solutions

Venafi Encryption Director centrally manages all aspects of BIG-IP SSL certificates including monitoring/expiration alerting; validation; reporting/analysis/management; enrollment; and automated provisioning.

### Painless risk reduction

Upgrade to NIST-recommended 2048bit keys and certificates without sacrificing performance.

### Superior return on investment

Take advantage of virtualization, cloud computing, and on-demand IT while maintaining security, performance, and operational efficiency.

### Simplified compliance

Gain the ability to support federal customer applications because the integrated solution complies with Federal Information Processing Standards (FIPS).
