

Advantages of F5 Application Services for VMware Horizon with View

F5 and VMware offerings

- BIG-IP® Local Traffic Manager™
- BIG-IP® Global Traffic Manager™
- BIG-IP® Access Policy Manager®
- VMware Horizon with View

VMware Horizon with View has asserted a market-leading position in the virtual desktop space with millions now choosing a virtual desktop over a traditional physical device. When deploying VMware Horizon with View, the network can deliver significant advantages across access, security, availability, and scalability.

With F5® solutions for VMware Horizon with View, organizations can ensure that all users have secure, optimal, and fast access to their virtual desktops. Furthermore, F5 application services offer intelligent local and global traffic management providing industry leading scalability and availability for your virtual desktop deployment. Deployments ranging from hundreds to tens of thousands of devices will benefit from utilizing F5.

Unified and Secure Access

F5 BIG-IP Access Policy Manager (APM) offers users unified, secure access; broad support for authentication, authorization, and accounting (AAA) mechanisms; and stringent access policies. These features are combined with security endpoint checks, plus multi-gigabit-per-second SSL encryption, thousands of logins per second, and optimized connections. Further, BIG-IP APM offers full proxy support for PC-over-IP (PCoIP), a leading VDI protocol. This functionality allows organizations to simplify their VMware Horizon with View architecture to deliver hardened security and increased scalability for end-user computing.

Growing and Scaling End-User Computing

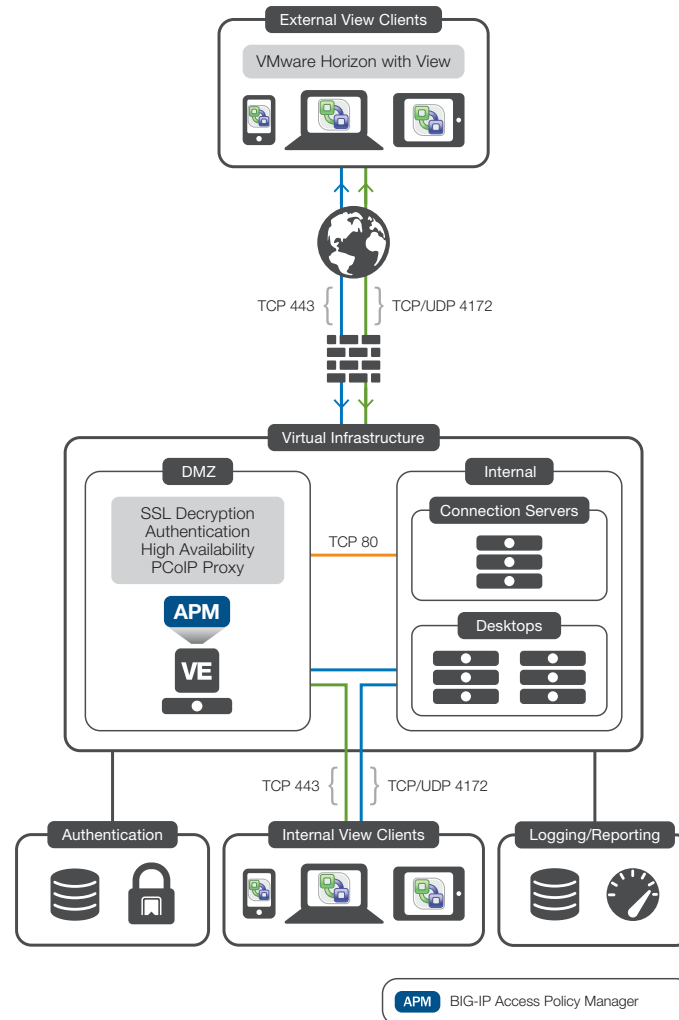

BIG-IP Local Traffic Manager (LTM) Application Delivery Controllers support redundant tiers of infrastructure within and across data centers for maximum availability. In addition, the patented, unified F5 TMOS® product platform architecture provides tremendous scalability—with up to millions of transactions per second.
